Linda Meng

(313) 747-5409 | lndmeng@g.ucla.edu | github.com/lindameng-0

Education

University of California, Los Angeles — Los Angeles, CA
B.S. in Statistics and Data Science — *Expected Jun 2030*

The Webb Schools — Claremont, CA
High School Diploma — *Jun 2026*

- **Dual Enrollment, Harvey Mudd College:** Intro to CS, CS for Insight
- **UC Davis COSMOS, Cluster 11 (Beyond the Numbers):** ML foundations (gradient descent, regularization, loss functions), dimension reduction and preprocessing; built an app-recommendation model on a real usage dataset

Research & Industry Experience

Independent ML Research (Advisor: Dr. Hongliang Wang) — Remote
Student Researcher, 2 Peer-Reviewed Publications (NHSJS, Curieux) — *May 2024 – Aug 2025*

- Built classifiers that flag suicide-risk Reddit posts for early human review; a fine-tuned **BERT** reached **97% accuracy (0.991 AUC)** on 16,000 posts, outperforming decision tree and LSTM-CNN baselines
- Modeled harmful-content spread across a 7,067-user Reddit network with an **SIR epidemic model**; targeting the most connected users cut affected users by 6.8%, over 3× the reduction of other strategies
- Consulted psychologist Shuang Cui on the ethics of automated mental-health screening and framed the model as triage for limited moderator attention, not a replacement for human judgment

Chinese Academy of Sciences — Shenyang, China
Research Assistant, Dexterous Manipulation — *Aug 2026*

- Assisted a graduate researcher on **autonomous grasping** for manufacturing with a **21-DoF Linker Hand L20**, targeting objects of varied shape, size and material
- Collected **teleoperated grasp demonstration** data using **data-glove** motion retargeted to the robot hand in real time while **ROS** logged synchronized camera frames, joint states and pressure readings
- Worked on a split stack with a **Raspberry Pi** for low-level hand control and sensor reads and an **Ubuntu** workstation for perception and planning, ahead of planned robotic-arm integration
- Assisted in **training the grasping model**, which uses the camera to guide the approach and pressure sensors on the joint surfaces to judge grip once the hand blocks the camera's view

Shenyang Institute of Computing Technology, CAS — Shenyang, China
R&D Intern, Agentic AI — *Jun 2026 – Aug 2026*

- Built a **RAGFlow**-based AI agent system for partner Liaoning Railway that reads its parts database for production specifications and generates **manufacturing process sheets**, bringing AI into production planning
- Brought agentic coding to the department, presenting AI coding-agent workflows at multiple departmental meetings and working with engineers and department heads to fit agents into existing development processes
- Co-built a demo of an industrial-grade open-source software management system for Liaoning University of Science and Technology, and attended client meetings with partner organizations

Shenyang Institute of Computing Technology, CAS — Shenyang, China
R&D Intern, Medical AI — *Jun 2025 – Aug 2025*

- Helped build the training data for a **YOLOv5**-based model that generates custom removable denture plans from dental scans of complex cases for The First Hospital of China Medical University
- Bridged the clinical and engineering sides by working with the hospital's medical students to turn clinical judgment into written **annotation guidelines**, then personally annotated 80+ scans for training
- Assisted with model training and testing, and proposed optimizations to its landmark detection for complex cases

Chinese Academy of Sciences Innovation Program (Dr. Liao Mo Zheng) — China
Research Assistant, Autonomous Vehicles — *2024*

- Debugged navigation algorithms for an autonomous vehicle and tested its performance on course
- **Calibrated infrared sensors** to keep line detection accurate under varied lighting
- Proposed and ran obstacle-avoidance tests to measure how reliably the vehicle handled course hazards

UCLA Anderson School of Management, ACIS — Los Angeles, CA
First-Tier Technology Consultant — *Sept 2026 – Present*

- Serve Anderson students, faculty and staff at the client service desk, resolving hardware, software and network issues

Competitions & Awards

Correlation One Terminal Season 8 | *Top 10 of 198,220 Algorithms* Mar 2025

- Co-developed a game-strategy AI on a 3-person team that placed in the **top 0.01%** of the global leaderboard

FIRST Tech Challenge World Championship | *Team Captain, 3 Award Nominations* 2025 – 2026

- Qualified for Worlds with team #359 WEBB.EXE; earlier won the SoCal Championship **Control Award** and the Interleague **Inspire Award** with the Winning Alliance

Kaggle Competitions Expert | *2 Bronze Medals* Jan 2026 – Mar 2026

- Bronze medals in Stanford RNA 3D Folding (top 7% of 1,867 teams) and CSIRO Image2Biomass (top 10% of 3,805 teams)
- Placed top 10% of 1,094 teams solo in Scientific Image Forgery Detection with a **U-Net (ResNet34)** segmentation model

Founded Products & Projects

Readerfold (readerfold.com) | *Founder & Developer; React, FastAPI, Supabase, LiteLLM* Jan 2026 – Present

- Built and launched an AI manuscript-feedback platform in which a panel of 3 to 9 simulated readers critiques fiction the way human beta readers would; grew it to **50+ users** entirely through organic channels
- Developed the full stack solo and a **multi-model LLM pipeline** in which each reader carries its impressions and open questions from section to section, with personas built entirely through prompt engineering
- Routed all model calls through a **LiteLLM** gateway with JSON validation and repair, usage tracking and credit controls; designed freemium, credit-based pricing that scales with manuscript length and panel size
- Handle all customer support and turn recurring feedback into product changes; shifted acquisition to SEO and am scoping a version for China's web-novel market that runs the reader panel on local Chinese models

GitWrite (gitwrite.live) | *Founder & Lead Developer* Sept 2023 – Present

- Founded and lead a **4-person team** building GitHub-style branching and version history for writers; it now supports the drafts and revisions of a **400-person** multimedia project
- Engineered an **AI merge feature** that reconciles conflicting edits into one coherent draft, so non-technical writers can adopt version control without learning Git
- Deployed on GitHub Pages and Railway with a custom domain, and iterated on the monetization strategy

Path.best | *Founder; Open-Source Campus Navigation* Sept 2022 – Present

- Built campus navigation with **classroom-level accuracy** and a collaborative mapping system for students to map paths
- Designed a crowdsourced feature that anonymizes walking data to **auto-map uncharted paths** without manual surveying
- Deployed at The Webb Schools, pitched to **21 schools**, and open-sourced the project for other schools to adopt

Laconic | *Open-Source Developer; Python, Multi-Agent LLMs* Aug 2026 – Sept 2026

- Built a toolkit that finds where **multi-agent AI handoffs** lose requirements and repairs them with source citations
- Repaired **15 of 18** faulty handoffs in synthetic fault-injection tests by replaying fixes against executable checks
- Designed structure-preserving compression for agent-to-agent messages that kept tool plans fully intact on benchmark

Leadership & Service

FIRST Tech Challenge Team #359 WEBB.EXE Claremont, CA

Captain, Lead Programmer & Lead Outreach *Sept 2022 – Jul 2026*

- Led the team to the **2025–26 FTC World Championship**, the team's goal across four seasons
- Identified autonomous pathing errors as the prior season's key weakness and self-taught **PedroPathing** to fix them
- Built **multi-threaded teleop control** that improved the robot's responsiveness to driver input
- Directed outreach reaching **1,500+ students** and mentored FTC teams across 4 countries

Dear Dream Foundation

Secretary, Instructor & Curriculum Designer *2024 – 2025*

- Co-designed two week-long **Python bootcamps** for primary schoolers from non-technical households, taking 40+ students from no experience to building their own games
- Led each session's opening lesson and developed hands-on activities to keep students engaged

Technical Skills

Programming: Python, Java, SQL (PostgreSQL, MySQL), JavaScript
ML & Vision: PyTorch, scikit-learn, pandas, BERT, YOLOv5, U-Net, RAGFlow, LiteLLM, Gemini API
Robotics: ROS, Raspberry Pi, Ubuntu/Linux, teleoperation & data gloves, sensor calibration, PedroPathing
Web & Tools: React, FastAPI, Supabase, Railway, GitHub Pages, Git, Claude Code, Codex
Languages: English and Mandarin Chinese (native)
